

Life More Secure.

The Door Switch™ is a patented over-the-door pressure sensitive alarm for your behavioral healthcare facility.

New Construction and Retrofit Solution for your Patient and Bathroom Doors!

Strobe light placed above room door gives quick visual location.

Keypad (without cylinder) accepts most key systems. Used to deactivate and reset the alarm (remote keypad also available).

Key reset of system at monitored room assures patient safety.

The Door Switch™ retrofits on double acting doors!

BASIC MONITORING PANEL FEATURES

All wiring and alarm input/output devices are supervised to warn of tampering.

48 double door, 96 single door rooms available on a single basic panel. Up to 8 panels can be linked together to monitor a total of 384-768 doors.

Keypad console audible indicator and two-line, 32 character LCD display alerts an alarm condition or system trouble at nurses' station.

Main panel provides an event log (history log) that can store up to 512 events (time of event, response time and reset time). Logged events can be viewed on keypad console.

Keypad or laptop programmable.

Keypad "beep" walk test feature performed without triggering sirens and strobes.

Independently controlled notification devices (sirens) can be stationed in wings, floors and/or other designated areas of a facility.

All system components are electronically supervised and will notify if maintenance is required. Monitored doors can be isolated from the system during maintenance.

Example of Basic Monitoring Keypad Console

The Door Switch™ is a patented design. Patent No. RE42,991 and RE44,039
